Description

The high-quality lithium-ion (Li-Ion) rechargeable battery from ANSMANN is the ideal replacement for 1.5V disposable alkaline batteries or rechargeable 1,2 V NiMH batteries. While some battery-operated devices have problems with the lower output voltage of NiMH batteries, the ANSMANN 9 V Li-Ion battery is fully compatible with alkaline batteries. In addition to its rechargeability, it also scores with a constant output voltage of 1.5V over 95% of the operating time thanks to its built-in electronics. If the battery still has a residual capacity of approx. 5%, the output voltage is reduced to 1.1V to signal to the user that the battery should be replaced. The constant output voltage of the ANSMANN 1.5V Li-Ion rechargeable battery ensures, for example, that a torch always shines brightly and evenly, or that a milk frother, electric toy or shaver always runs at full power.

- Cell size: 9V block
- Cell chemistry: Lithium ion
- Nominal voltage: 9 V
- Nominal capacity: 400 mAh
- Minimum capacity: 340 mAh
- Energy: 3,7 Wh
- Storage temperature: -20 - 25 °C
- Operating temperature: -20 - 60 °C
