Description

Ni-Glo is a unique self-glow marking device measuring only 5cm x 1.2cm which can be repeatedly recharged when required. Recharge takes place by exposure to sun or artificial light sources i/e torches, LED's, car headlamps etc. Ni-Glo will begin to function after only ten minutes exposure to direct light but a longer charge or stronger light source will increase Ni-Glo brightness and prolong it's afterglow. Ni-Glo is battery free, safe and non-hazardous

The key ring or supplied clip & joint make Ni-Glo suitable for attaching to rucksacks or clothing therefore helping to be seen while walking at night alternatively attach Ni-Glo to tent entrance zips, keys, phones, animals or anything which needs to be found in the dark.

Simply recharge by daylight or under a lamp and your Ni-Glo Marker will shine in the dark for up to max. 12 hours - every day and up to 10 years long. Specially designed for the marking and recognition of equipment and personal items and particularly useful for anything that one needs to find in the dark. Camping equipment, guy ropes, rucksacks/suitcases, sleeping
