Description

The Powerbank '20' offers capacity of 20.000 mAh. Up to 4-5 times charging of a smartphone is possible. The additional function Qi "wireless charging" enables wireless charging via induction (only possible with Qi-capable devices). The robust and splash-proof housing protects the Powerbank from damage. The connectors are protected against splash water and dust by a silicone cap. The device can be recharged via Micro-USB or via solar (only for emergencies). In addition, a bright LED display with a burning time of up to 15 hours is built in. A loop makes it possible to hang up the powerbank in the tent or fix it to the backpack during the day so that the battery can be charged while hiking. The status display in percent shows the charged status. The energy is stored in a high-quality lithium polymer battery with a long service life. With charging cable.

Properties:

- Qi wireless charging function
- robust and splash-proof housing IPX5
- silicone cap on the connectors
- 3 standard USB outputs with 1 x 1A and 2 x 2A
- bright LED display 500 lm (up to 15 hours burning time)
- dimmable with 3 light levels
- battery status display
