Description

The impressive Boker Tiger- Damascus adds a very special model to our series of pocket knives steeped in history. The collector's knife with a historical past is a real piece of living history and combines high-quality craftsmanship with authentic materials. Known worldwide as the Tiger, the Panzerkampfwagen VI was used by the Wehrmacht from the late summer of 1942. It is considered one of the most famous tanks in history, despite its modest production number of only 1350 units and the resulting low strategic importance. The development of the heavy tank can be traced back to 1937, and series production began in August 1942. Today, there are only seven preserved units, which are exhibited all over the world. Due to the low availability, the so-called Frankentiger was even assembled for this purpose from wreckage parts of different production years.

The tank parts we use come from a Tiger I of the Schwere Panzerabteilung 502, which was destroyed in combat in Latvia in the summer of 1944 in a heavily wooded area near the town of Bauska. Based on the wreckage found at the original excavation site, it was determined that this Tiger was an early to mid-production model. Examination of battle damage to the remains, military records and local historical accounts revealed that this Tiger tank collided with both a Russian T-34 medium tank and an SU-76 anti-tank gun, and was also damaged by a stationary 45-mm anti-tank gun. It is still unclear which of the impacts caused the most damage and sealed the fate of the Tiger. However, as several 76-mm fragments were lodged in the heavy armour, it is assumed that a nearby T-34 landed the decisive hits before it was destroyed 300 metres away, too.

Otto Carius and Albert Kerscher, two of the most successful tank commanders of the Second World War, were attempting to stop the advance of Soviet forces on Riga at the time, with the Schwere Panzerabteilung 502. The division was able to so devastatingly defeat the enemy blockade forces near Tukums that it was able to retreat to the Latvian Courland together with more than 500,000 other soldiers of the Heeresgruppe Nord. There the forces were encircled in the further course of the Soviet advance. The Kurland Cauldron served as a bridgehead and could be supplied by the Kriegsmarine via sea. It withstood six major attacks by Soviet forces until the unconditional surrender on 8 May, 1945.

The straight-edged Boker Tiger- Damascus is equipped with a unique damascus blade made from the steel of the battle tank destroyed at Bauska. The non- stainless mosaic damascus is forged for us by hand by Chad Nichols in the Intrepid pattern and is reminiscent of the tank tracks left in the ground by the Tiger's heavy tracks. Unlike conventional damascus, the production of mosaic damascus does not create layers, but complex damascus bars are forged by hand into a mosaic in an elaborate and very complicated process. The ball-bearing blade is opened by a thumb stud and locked by a sturdy steel framelock with a stonewash finish, while a Hinderer lock-stop acts as an over-extension protection for the lock. The overall shape of the knife pays homage to the famous lines of the tank, while the decorative pivot screw is modelled on the main drive sprocket. The slightly contoured handle scales made of burlap micarta are provided with precisely milled grooves, which are reminiscent of the characteristic surface structure of the Zimmerit coating of German armoured vehicles. With lanyard hole and milled clip (tip-up/r) with steel ball. Handmade in the Boker Knife Manufactory in Solingen. Supplied with a classy suspended display, a certificate of authenticity and an individual serial number.

Overall length: 19,8 cm

Blade length: 8,5 cm

Weight: 141 g

Blade thickness: 3,6 mm

Blade material: Damast

Handle material: Micarta

Lock: Framelock

Made in Germany.

Boker Manufactory Solingen

The famous knives with the world-renowned tree symbol have been made by hand in Solingen, the city of blades, since 1869. Since the company was founded, no knife has left our manufactory without this seal of quality. The long history of Boker Baumwerk is characterized by eventful times. But one thing has always remained the same in over 150 years: our passion and enthusiasm for extraordinary knives. The Böker Messer-Manufaktur Solingen has developed into a global innovation leader and the largest manufacturer of sports knives, tactical knives and collector's knives in Europe.
