Description

The easy-to-use suspension system of the hammock (tree huggers) are belts which can be and should be used instead of rope for fastening hammocks or tarps. This suspension system is safe for trees and ensures stress-free rest outdoor.

After having wrapped the belts around trees, simply attach the hammock using the clips in the selected loops of the belt so that it will be at the desired height and appropriate tension.

What is significant – such a construction of the straps allows at the same time to obtain a low weight of the fastening system and ensure a comfortable adjustment.

This set consists of two ULTRALIGHT carabiners and two belts equipped with a number of fastening loops.

The belts are 3 m long each. Each of them is equipped with 6 fastening loops. One end is equipped with 5 loops and a single loop on the other end. The loops are 10 cm long.

Strength 200 kg.

Usage instructions video with hammock (starting from 45th s):
