Description

4x3 THERMO tarp is large, rectangular, waterproof tarp with a heat-insulating layer (UPF 50+). Dedicated to those who, while traveling, like to get some comfort and space for themselves at the end of the day, and of course to hammock lovers.

The upper side of the tarp is dark green, easily absorbs heat, and discreetly blends into the woods surrounding. The other side is covered with a heat-insulating layer, which increases thermal comfort, both in hot and cold weather.

The silver cover on the other side perfectly reflects the body heat, maintaining thermal comfort, e.g. during cold nights.

During hot days, it reflects the sun's rays, significantly lowering the temperature under the tarp.

Properties:

- Triple stitch enforcement tapes
- The fabric is not fireproof!
- Practical and light camping shelter
- Can be used as a signal blanket in an emergency situation
- Takes very little space - the dimensions are barely 30xØ16 cm
- Specially designed loops are much easier to use than the classic ones
- Construction of the loop allows better distribution of the forces on the tarp edges
- Dimensions 4x3m, 12 m2
- 19 loops
