Description

Tarp 3x3 ULTRALIGHT by BUSHMEN Travel Gear - a new reference point for the ULTRALIGHT category.

Is one of the absolutely lightest on the market full-size (3mx3m) tarp. It weighs only 425g!

Application

If you are fed up with every unnecessary gram you need to carry with you, Tarp 3x3 ULTRALIGHT is a real treat for you.

Everything is ULTRA here - we made sure that even the puller was ultra.

It weighs less than 0.5 kg. We checked - exactly 0.4831g!

When it is packed, the tarp takes very little space - as much as 0.5l bottle.

Thanks to this, it works well as an element of ultralight equipment of a walker, as well as a bicycle tourist, canoeist, etc. Generally, if you are an outdoor enthusiast, this is absolutely the equipment for you.

Construction

The tarp is sewn using ultralight 15D silnylon reinforced with microripstop.

The waterproof silicone layer provides immunity up to 2500mm H2O.

There are 19 characteristic loops arranged around and 3 through the middle of the tarp.

The middle sewing line and the loops are reinforced and secured with a special black tape. The tape is hot-welded, and therefore, it permanently bonds with the silicone layer creating almost unity.

This technology ensures that the tarp is fully waterproof and strengthened at this point.

ORDER CONFIRMATION

As added 6 pulling lines (3m each) with the tensioning system and a bag with transport handles.

Loops

Specially designed loops are much easier to use than the classic ones. The characteristic clearance between the loop tapes not only makes it easier to work in difficult conditions, but also allows the tape to better fit around the lashings.

An inconspicuous change in the construction of the loop also allows to better/wider distribute forces acting on the tarp edges. For this reason, we could resign from sewn reinforcements on the sides without losing strength. The loops on the corners are the most exposed to overloading, therefore we left traditional reinforcements, thanks to which our tarps are even stronger.

Tarp 3×3 ULTRALIGHT – Tensioning system

Whats importnet – the set includes 6 cords with unique tensioners. For this reason, the correct tarp tensioning is quite simple and can be done directly at the tarp loops. The tensioners are fastened to the loops currently in use simply by hooking them on the loop. The loops and the tensioners are matched to each other. Having hooked, the tensioner holds perfectly.

This solution allows to use the tensioners where they are needed and are not an unnecessary tarp load.

To attach the pullers, simply select the cable on the tensioner to obtain the desired tarp tension

Transportation bag

The bag, in which the tarp is put, is equipped with handles and loops. They are placed both along and on the bottom of the bag. The handles allow to comfortably attach the tarp sack to your backpack without fear of accidentally slipping during transport. They make it easy to carry and remove from places such as a kayak's beak or just between different luggage.

In addition, by interweaving the hammock's ridgeline by the loops, the bag can be used as a convenient pocket for things that you want to have at hand.

Having folded the sheet, it takes up very little space, it fits in a 1l bag. The size of 20 x 7.5 x 7.5 cm allows it to be put in the outer pocket of the backpack.

Application

Tarp 3×3 ULTRALIGHT can be pitched in many ways due to the convenient layout of the loop.

It provides convenience and protection in every situation.

Using the surroundings (trees, rocks, depressions) and trekking poles, paddles, bicycles or just sticks, you can create a great tent perfectly adjusted to the location and weather.

In extremely bad weather, you can create an "assault tent" in a few moments. Such a shelter fully insulates both from the ground and from every other side.

Tarp 3×3 ULTRALIGHT is, of course, an excellent protection when using a hammock (e.g. BushBed hammock). It can be used, for example, as a roof
