Description

The VAGABOND mosquito net is a 220g well-designed net that protects you from insects whether you are sleeping on a mattress or in a hammock.

Construction

VAGABOND Mosquito Net - The most important part is the mesh, which is designed to tightly wrap the hammock or mattress. A dense mesh with a diameter of 0.7 mm guarantees complete safety not only against mosquitoes, ticks and worms, but also against black flies.

The diameter of the loops is 0.7mm - this means 196/cm²!

The mosquito net has 3 holes with stitches.

When entering a hammock or sleeping on a mattress, you can close the entrance with tape tightly around the sides of the hammock or mattress.

In this way, you will create an effective protection against mosquitoes.

The nylon hem prevents debris from sticking and significantly increases the strength of the mosquito net.

The other two openings are located at the top of the mosquito net.

These are used to install the attached ridge line and ropes for hanging the hammock.

Ridgeline is a cord with adjustable tension, on which the mosquito net is hung, it forms the ridges of the roof.

The ridge line has a unique system for adjusting it after entering the hammock.

It can be pulled perfectly so that the mosquito net is as high as possible. Both entry and exit are very easy. Release the puller and lift the mosquito net up.

Specification

- Weight 220g
- Dimensions: 3.1m x 1.5m
