Description

Comodo Merino wool TREKKER Trekking Socks are thick specialist trekking socks from the **Outdoor Heavy Weight** line for the winter season. Made of 80% Merino sheep fibers **SILTEX** with an admixture of **AG + polyester** containing **silver ions**.

They provide **an excellent thermal balance**, protecting against cold and overheating.

Fibers enriched with an **antibacterial agent based on silver ions** help to reduce the growth of bacteria and mold, while **reducing unpleasant odors**.

Five specially designed zones protect the foot from chafing and reduce the pressure that shoes exert on the leg.

A special construction with **a pressure-free ribbing** adjusts the sock to the foot, without obstructing the blood flow.

5 special zones increasing the wearing comfort :

- **pressure zone** - distributes the load, reduces friction
- **reinforcement zone** - absorbs and protects the arch of the foot
- **shape zone** - adjusts the sock to the foot
- **flattened seam zone** - protects fingers against abrasions
- **control zone** - prevents the socks from slipping

Main advantages:

- as much as 80% merino wool
- fibers enriched with silver ions
- excellent insulation against cold
- antibacterial effect
- pressure-free welt

Composition of the yarn in trekking socks: 80% Merino Wool, 12% Polyamide, 5% Polypropylene, 3% Elastane.

Merino Wool - natural wool of the highest quality, obtained from Merino sheep. Merino yarn is characterized by exceptional softness, thanks to which it provides a high level of comfort.

Features: Merino wool provides great thermal insulation; on a hot summer it cools the skin and warms it during cold winters. And this is because a lot of air is trapped in the structure of the wool fiber. Regardless of the type of physical activity, wool insulates and regulates temperature. It allows you to keep warm in the cold and cool in the heat, and at the same time removes moisture, leaving the skin dry for longer.

Benefits: Merino wool perfectly separates moisture from the skin - its hygroscopicity is the highest among all fibers. Very popular for the production of socks and outdoor clothing as it is known for its high quality and durability. Thanks to self-cleaning scales located on the surface of the fibers - merino wool significantly reduces the unpleasant smell that arises as a result of sweat deposition. In addition, it maintains an environment hostile to bacteria. Hence, it is also valued in the production of children's clothing. In addition, merino wool is characterized by very high softness and fluffiness, and its fibers are extremely thin and elastic.

Made in Poland.
