Description

The Earmor™ Hearing Protection Earmuff protects against dangerous noise at the same time allowing you to hear ambient sounds. Sounds are detected by two directional microphones and reproduced by the speakers inside the muffs. The power source is two AAA battery cells.

The new version, model 2024, received new silicone gel earmuffs increasing comfort during long-term use.

The M31 provides audible protection in noisy areas with impulsive noise, such as firearms use zones. The microphones mounted in the earmuffs improve the situational awareness of the user, while allowing him to hear sounds from close surroundings and to protect his hearing. Harmful sounds are limited to a safe level of 82 dB, and the lower are amplified.

Key benefits of active hearing protectors:

Allow you to normally hear and even enhance standard sounds: speech, commands, instructions, sounds from the environment

Protect your hearing during shooting

Strengthen standard sounds - with volume control, they let you hear better than without earmuffs

Features:

- Suppresses harmful noise above 82 db
- Amplifies low-level sounds
- Comfortable ear cushions for tight seal
- Low-profile cups for shooting
