Description

U2cy, like in Cygnus, the Latin word for swan, is the new collector's version for 2022 with the Swan constellation laser engraved on the right side of the blade. After selling tens of thousands of U2 folding knives, it is easy to understand that this light, extremely sharp folding knife is among our most appreciated products. U2 is the first folding knife in the world that since 2004 offers a blade in laminated powder steel and it has really proven to work very well when you demand extreme sharpness. Since 2012, we offer a limited edition of U2 knives with well-known constellations, as below:

- 2012 U2 Cassiopeia,
- 2013 U2 Gemini,
- 2014 U2 Orion,
- 2015 U2 Scorpio,
- 2016 U2 Leo,
- 2017 U2 Taurus,
- 2018 U2 Ursa Minor,
- 2019 U2 Pegasus,
- 2020 U2 Aquarius,
- 2021 U2 Sagittarius,
- 2022 U2 Cygnus.

The Swan constellation, or the Northern Cross as it is also called, is one of the starry heaviest and most magnificent constellations. It is part of our own galaxy, the Milky Way, and consists of a number of very clear giant

stars that with a little imagination can be shaped into a swan that dives with its head down. The constellation shows many extremely interesting astronomical oddities such as huge black holes, radioactive stars, quasars, nebulae but above all - stars that turn out to have so-called exoplanets, i.e. Earth-like planets orbiting around them.

The strongest star in the constellation is called Deneb and is a super gigantic celestial body about 1400 light-years from us, perhaps the brightest of all the stars in the night sky. According to Greek mythology, the Swan was a disguised Zeus, a god, a creature with both faults and merits, just like us humans.

Our nearest star is our own sun, maybe you do not think about that? When the light from the sun reaches us, it has been on its way for eight minutes. The speed of light is 300,000 km/second. We are "just" far away from life to exist on Tellus, our earth. But what if there are Earth-like planets in the constellation Swan? It will not be easy to get there for a check, the distance is really astronomical.

About knife:

This is the world's first folding knife with a blade of laminate powder steel, the market innovation Super Gold Powder Steel, SGPS. Powder steel is extremely costly and difficult to work with, and requires advanced technology in combination with experienced knifemakers. The advantage of this steel lies in its outstanding edge retention: there is simply nothing to compare today. The slim handle consists of strong composite material, which makes the knife light and pleasant to carry. With blade grooves on either side, the knife is completely symmetrical and is as easy to use for right-handers and left-handers. The traditional lockback function offers no unpleasant surprises, but locks the blade in its open position with a distinct reliable click.

Additional information

Steel	Lam. SGPS
Hardness (HRC)	62
Edge	Flat ground
Handle material	Grilon
Weight, knife only (g)	45
Blade length (mm)	64
Blade thickness (mm)	2,5
Total length (mm)	150
Total length, folded (mm)	86
Locking	Lock-back
