Description

10 litre fuel canister made of polyethylene with UN approval for petrol, diesel and other hazardous goods. It meets the highest safety requirements and is robust and resistant to impact. It is also TÜV-approved and suitable for E10. The outlet pipe is attached to the side of the canister body and the cap attached to the canister has a child safety screw connection. Several canisters can be stacked to save space. One advantage over metal canisters is that they do not accumulate rust particles and have a lower thermal conductivity.

- with child safety screw
- very robust
- stackable
- UN approval for petrol, diesel and dangerous goods
