Description

The KHS Fire Starter with its built in H3-Tritium Gas Light is an extremely useful piece of equipment for igniting fires. By using the integrated ceramic blade one can produce, through friction, fire igniting sparks. These sparks can have an extreme temperature up to over 2000 °C.

Material:

Anodized Aluminium which is available in various colours, Blade: Ceramic, Inner Rod: Ferrocium

Functions:

Inside the KHS Firestarter one will find a rod made out of Ferrocium that is easily removed by turning the robust cap. Located on the upper, outside housing of the firestarter is a built-in ceramic blade. When one rubs the rod lengthwise against the ceramic blade bright sparks, of extreme high temperature, are released. It is with the sparks that one can ignite a fire.

Features

- Extremely robust
- Uses ferrocium which known to produce extremely bright sparks of high temperatures
- High quality ceramic blade which through friction releases the sparks
