### Description

#### LENSOLUX digital night vision device 6 x 52

With integrated laser-infrared illuminator. This digital night vision device with 6x magnification and a lens diameter of 52 mm is an exceptional build quality. The digital technology of this device is not as sensitive as a comparable device with a night vision tube. Nevertheless, it is recommended that the unobstructed lens should not be exposed to bright light in order not to damage the quality converter chip. The already high power in the normal setting is increased by switching on the IR function. Both eyepiece and objective can be focused finely. In addition, the device has a separate brightness control to adjust it to the ambient lighting. With non-slip, rubber-like surface, it fits comfortably in the hand. In connection with the cold-insensitive CR123A battery (included), it works in temperatures as low as -30 degrees Celsius. Each night-vision comes with a detailed instruction manual. This night vision device is **suitable for observations at longer distances** and has been tested by independent persons. It is certified an excellent price / performance ratio.

#### Technical data

- Description: 6x52
- Magnification: 6-fold
- Lens diameter: 52 mm
