Description

LENSOLUX RedDot 1 x 22 x 33 - new high-quality reflex-sight in a semi-open version with **4 different illuminated reticels - red or green - freely selectable!**

Especially for situations where spontaneous and fast-speed targets are required even on the tightest shooting range. This reflex sight allows you to shoot on moving targets even in the smallest field of view. You can keep both eyes open and are intuitive with the fine preselectable illuminated images in the target. No parallax by 1 x magnification - keep both eyes open.

4 different reticles (dot, cross, dot in circle and dot in circle with side- and height-line) **can be dimmed 6 times in red or green** - 48 different settings are available. Pressing the two buttons on the left side of the device selects the two colors (the front button red - the rear button green) and the brightness is adjusted by repeatedly pressing. You can switch between colors without problems, without changing the brightness of the reticle. Easy handling to quickly adapt to the situation.

The larger lens is multi-glare coated and offers a wider field of vision. Simple magnification with sight diameter 22 x 33 mm. Housing 82 mm long made of sturdy aluminum, matt-black coated. With integrated **quick-change mounting** for 21.5 mm Weaver rail. This device is operated by 3 pcs. button-cell batteries AG5/LR754 (included).
