Description

The certified version of the multi-talented mission boot: With the Z-8S GTX C, LOWA has created a robust boot that is both functional and lightweight. It is perfect for missions performed on challenging terrains and for marches with medium-heavy backpacks. This quality is also reinforced by the footwear's mission-optimised rubber mix and the profile of the sole. The heat- and cold-insulating sole complex is anti-slip. It is also resistant to oil, petrol and contact heat. The elevated upper made of tough suede leather provides optimal stability and support. At the same time, the durable PU material used in the sole provides exceptional cushioning and stability with the help of various degrees of rigidity. The lining with the GORE-TEX membrane creates an optimal foot climate even during sweat-generating activity. The Z-8S GTX C is also antistatic. Specially made for combat, fast roping, parachute jumps and patrol.

Functions:

- Equipped with lacing hooks with a closed design. They guide the laces very securely and keep them from getting caught upon contact with objects.
- To provide effective cushioning and improved comfort, the sole of the Z-8S GTX C is bonded to the upper in a technically demanding injection process. The upper boot is placed into a specially designed mould. Various layers of PU foam padding are then poured into it. In the process, the sole and upper are bonded together.

ORDER CONFIRMATION

- Lightweight - This process uses a plastic called polyurethane. It is a very lightweight foam padding.
- Cushioning - The plastic called poly urethane is a foam padding that has very good cushioning properties. The plastic retains its form and springs back to its original condition even when its millions of tiny bubbles are frequently pressed together. This, in turn, creates a good rebound effect.
- A wide range of design options - Thanks to direct injection, the sole can be designed in a very large number of ways. The multifaceted properties of the materials used enable the shoes to be effective in a broad number of areas.
- With the LOWA-MONOWRAP® frame, the midsole of the Z-8S GTX C provides the very best comfort. This three-dimensional midsole design was developed by LOWA in 1995. The frame comfortably cradles the foot and support it when the shoe wearer ventures across uneven surfaces. The sole design is slightly raised for shoes with a STABILITY FRAME.
 - Good guidance for the foot - The foot is optimally nestled into the shoe thanks to the frame's three-dimensional design.
 - Increased comfort - The special midsole design ensures snug footing in the shoe. The foot is pleasantly cradled by the three-dimensional frame.
 - Lightweight - The LOWA-MONOWRAP® is made of a plastic called polyurethane. It is a very lightweight material.

Technical properties:

- **Upper material:** 100% Suede leather - Suede leather comes from the flesh side of the hide. It has a looser fibre structure, a quality that creates a velvety surface and a light pile. Suede leather is particularly durable and open-pored. Depending on the desired look, suede leather can remain untreated or be oiled or waxed.
- **Closure:** Closed loops of light metal. Provides close and comfortable boot closure. Designed for the boot to be hooked up and thrown in as short a time as possible. The length of the boot cords ensures that the boots can be pulled and pulled without the cord being pulled from the upper locking eyes.
- **Lining:** A water-repellent, breathable GORE-TEX membrane.
- **Midsole:** 100% Polyurethane (PU) - Polyurethane (PU) is a soft plastic that has very good cushioning properties and is usually used in the midsole as a result. Through the use of PU, the soles become lightweight and functionally flexible.
- **Sole:** LOWA® TACTICAL Z TRAC® - The Z-8S GTX C is equipped with a LOWA RUBBER OUTSOLE. Conceived by LOWA to meet the challenges of real-world use, the profile design is made from an optimised rubber compound. The result is a rubber outsole with good traction in the backcountry and off trail.

The special profile design of the LOWA® TACTICAL Z TRAC® impresses users with its good support and grip that is delivered even on challenging terrain. The sole optimised for fast-roping missions combines heat- and cold-insulating qualities. It is antistatic and
