Description

Robust and very efficient rocket stove made of stainless steel with a large, cast-iron top plate. The air supply can be regulated via two separate doors / chambers on this model. The two chambers are separated by a grid. Even when the combustion chamber is heavily loaded, the opening of the lower chamber ensures a good air flow. The combustion chamber is well insulated and thus ensures low heat loss, high efficiency and shortens the cooking time required. In addition, the cast-iron support plate stores the heat excellently and distributes it evenly. Various materials such as wood, charcoal, wood pellets or branches can be used for firing. The efficient combustion produces an almost smoke-free flame without flying sparks. The rocket stove is also equipped with 2 side-mounted handles insulated with plastic. The transport bag with an inside made of flame-retardant 210D Oxford polyester is included in the scope of delivery.

- adjustable air supply
- insulated combustion chamber
- large, cast-iron support plate
- handles insulated with plastic
- can be fueled with different materials
- incl. transport bag

- Weight 6.600 g
- Material: stainless steel
- Support plate: cast iron, Ø 32 cm
- Oven outer diameter Ø 22.5 cm
