Plastic film containing a one-way valve.

Description

Reliance Rebreath CPR Face Shield with Valve

The **Reliance Rebreath Resuscitation Device** is a compact and hygienic **mouth-to-mouth barrier** designed to provide safer and more effective ventilation during CPR. It features a **one-way valve** that allows airflow to the patient while preventing direct contact.

Made from a transparent plastic film, the device acts as a protective barrier between rescuer and patient, helping reduce the risk of cross-contamination during emergency resuscitation.

Key Features

- **One-way valve system** for safe air delivery
- **Protective barrier film** to reduce infection risk
- **Compact and lightweight** design
- **Easy to use** in emergency situations
- **Transparent material** for proper positioning
- **Ideal for first aid kits, IFAKs and emergency responders**

ORDER CONFIRMATION

The integrated **one-way valve** ensures that air flows from the rescuer to the patient without allowing reverse airflow. This significantly improves hygiene and safety compared to direct mouth-to-mouth resuscitation. The flexible plastic film covers the patient's face, creating a barrier while still allowing clear visibility and proper positioning during CPR.

Applications

- First aid kits and emergency kits
- CPR and resuscitation situations
- Professional medical use
- Outdoor and travel safety kits
- Workplace and vehicle safety equipment

Specifications

Film Material	PE (Polyethylene)
Valve Material	PP (Polypropylene)
Film Size	21 × 34 cm
Valve Diameter	Ø 25 ±1 mm
Package Dimensions	70 × 95 × 10 mm
Sterile	No

Regulatory Information

This product is classified as a **Class I medical device** under Rule No. 1 and complies with applicable medical device regulations (SI 2002 No. 618).

Storage

Store in a dry, cool place away from direct sunlight and moisture.

Important Information

This device is intended to assist with resuscitation efforts. Proper CPR training is recommended for effective and safe use.

FAQ

Why use a CPR face shield? Barrier between rescuer and patient, reducing the risk of infection.

Is the valve reusable? Intended for single-use in emergency situations.

Can it be carried daily? Makes it ideal for everyday carry in a bag, car or first aid kit.

Is it suitable for professional use? Yes, for both layperson and professional emergency responders.

Glossary

- **CPR:** Cardiopulmonary resuscitation, a life-saving technique used in emergencies.
- **One-way valve:** A valve that allows airflow in one direction only.
- **Barrier device:** Equipment used to reduce risk of contamination during medical procedures.
