### Description

This classic bench stone has the highest available density and as a result is the rarest of all Arkansas stones - with maximum density for particularly demanding users and extremely sharp edges. Approximately corresponds to 8000 to 10,000 grit. The 10" Bench Stone Translucent Arkansas is sized at 254 x 50.8. Color- Grey!

Made in USA.

Please note that "translucent" does not necessarily describes the look of the stone, but is the name of this quality class/category. Oilstones in the translucent category can be even solid white or light grey, with the same high class quality like stones which are in fact slightly translucent.

The oil stones of RH Preyda are mined by hand in Hot Springs in the Ouachita Mountains in Arkansas, the only single area where they can be found. The company was founded in 2013 and produces exclusively natural sharpening devices and the matching accessories. The extremely high quality stones are anything but ordinary.
