## Description

Tent with 100 % self upporting construction. Offers a huge benefit on rocky terrain or areas where there is not enough space to set up with guy lines and pegs. With improved stability. The vestibule already pitched due to the pole construction. The short flat sleeves and hooks helps to pitch fast and effective. Extendable and replaceable anchor points give flexibility in rocky or snowy terrain. The easy-to-use interior buckles extend the vestibule as required. The Ventilation can be operated from both inside and outside. The Dyneema/Nylon guy lines are reflective and a special construction lends additional stability in stormy conditions. Extended guy line webbing transfers the force from webbing stitching to the pole construction for increased durability and stability. The cord locks bring efficient guy line organization.
