Description

Snigel Fleece Jacket 1.0 – Lightweight Tactical Fleece with Ventilation Zips

Lightweight. Warm. Easy to regulate. The **Snigel Fleece Jacket 1.0** is a fluffy, lightweight tactical fleece built for real-world use in cold conditions. Its smart construction combines two fleece types: a **high-loft "bear" fleece** that traps air for warmth, and a **smoother, thinner fleece under the armpits** to reduce bulk and improve moisture management.

Together with **armpit ventilation zippers**, this design gives excellent thermal regulation across a wide temperature range – from active movement to static cold-weather use. A high collar lined with fluffy fleece adds comfort, while practical details like a full front zip, zippered pockets, an elastic waist cord and durable cuffs make it a reliable everyday midlayer for duty, training and outdoor use.

Key Features

- Dual-fleece construction: warm high-loft fleece + thinner underarm fleece for better moisture control
- Front zipper closure
- Armpit ventilation zippers for fast heat release
- Vent zips designed to match Snigel combat and shell jacket ventilation
- High collar with fluffy fleece inside

FAQ

~~Is this fleece suitable as a midlayer under a shell jacket?~~ **Underarm pit ventilation zippers and underarm smooth fleece help manage heat and moisture under a shell.**

~~What makes the construction of tact heat compared to a regular fleece?~~ and reduces bulk where you sweat most. Combined with pit zips, it supports fast temperature regulation during movement and stops.

~~Does the arm pit zippers really help in cold weather?~~ can quickly make you cold later. Pit zips let you dump heat without removing layers, helping you stay dry and warm.

~~How should I choose my size?~~ outer fleece over a base layer, choose your regular size. If you plan to layer it under a thicker insulated jacket, a slightly slimmer fit may work better. (If you send Snigel's size chart or chest measurements, I can format it into a clean table.)

Glossary

- **High-loft fleece:** Fluffy fleece that traps air for insulation and warmth.
- **Pit zips:** Underarm ventilation zippers that allow quick heat release without removing layers.
- **Thermal regulation:** Managing body heat by balancing insulation and ventilation during activity.
- **No Melt No Drip:** A material property designed to reduce melting and dripping behavior under high heat exposure.
