Description

Travel wallet with RFID blocker. The CRYPTALLOY® foil blocks radio waves and reliably protects against data theft via RFID.

Folder RFID B - Wallet with TÜV-certified RFID blocker

The Folder protects against data theft: The wallet is equipped with an integrated RFID readout protection. In the RFID B folder, credit cards and ID cards find a safe place because the integrated CRYPTALLOY® foil blocks the radio waves and prevents data theft using RFID reading devices. The folder offers three compartments for bank and credit cards, a small coin pocket with zipper, a clear compartment, e.g. for your ID card, and a banknote compartment with an additional zipper pocket. Get more information about RFID and all Tatonka RFID / NFC blocking products [here](#).

Additional information:

With the CRYPTALLOY® foil Tatonka uses a film that offers maximum shielding against relevant frequencies (from 100 kHz to 4 GHz; this means low, high and ultrahigh frequency range) and due to a frequency shift disturbs any radio communication. This was tested and certified by the TÜV Saarland. As the manufacturer 'Kryptonik Technologies' has confirmed the required processing of the foil in all of Tatonka's RFID products.
