Description

Multicurved Training Plates Features and Benefits

- **Designed for Versatile Use:** Suitable for Military, Law Enforcement, and Civilian use.
- **Training Utility:** Allows you to "train like you fight" without risking damage to your life-saving and expensive ballistic plates.
- **Durable Construction:** Made of extremely durable high-density rubber.
- **Steel Core Option:** The 2.5kg version includes a steel core for added weight.
- **Impact Resistance:** Plates won't crack or break when hit, dropped, or impacted.
- **Realistic Design:** Replicates the weight, shape, curvature, and thickness of 25x30cm (10x12") multicurved ballistic plates, providing a more comfortable wear experience compared to standard single curve plates.
- **Weight Options:** Available in two weight standards:
 - **Standard:** 2.5kg (5.5lbs), 25mm (1") thick.
 - **Lightweight:** 1.5kg (3.3lbs), 20mm (0.78") thick.

ORDER CONFIRMATION

- **Intended for Tactical or Physical Exercises:** The replica is intended for use during tactical or physical exercises as a mass and size substitute for the hard ballistic insert.
- **Anatomically Shaped:** The replica is anatomically shaped (embossed in 3 planes) to ensure high wearing comfort.
- **High Mechanical Resistance:** Made of rubber granules weighted down with a steel insert, pressed together with a polyurethane binder under high pressure. This results in a compact structure and a very high mechanical resistance combined with resistance to chemical and environmental agents.
- **Mechanical Load Resistance:** The replica can be safely subjected to mechanical loads (particularly impact loads) that could be devastating to the ballistic insert.
- **Standard Dimensions:** The replica's dimensions correspond to those of standard M-size hard ballistic insert (300 mm x 250 mm / 10''x12'') with a weight of 2.5kg and a thickness of 25 mm.

PRODUCT HAS NO BALLISTIC PROPERTIES, DO NOT USE IT IN REAL COMBAT SITUATIONS.
