¹ [304 stainless steel](#) (also called 18/8) contains 18 % chromium and 8 % nickel - the chromium forms a thin passive layer that stops rust, while the nickel adds toughness and shine.

² [Single-wall vs. double-wall](#): a single skin keeps weight and bulk low and lets you warm liquid directly over a flame (a double-wall vacuum mug would warp or burst on heat).

[Hand-wash recommended to preserve the polished finish, but it's 100 % dishwasher safe.](#)
